## DOSYA PAYLAŞIMI VE YÖNETIM SİSTEMLERI

## İÇERİK

- 1 Giriş
- 2 NETWORK FILE SYSTEM
- **SAMBA**
- 4 NFS VS SAMBA
- **S** KAYNAKÇA

Bu çalışma kapsamında "Dosya Paylaşımı ve Yönetim Sistemlerinin Yapılandırılması" ele alınmıştır.

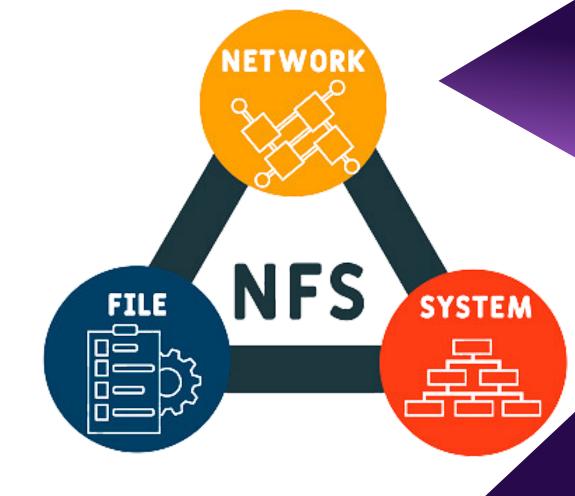

İlk olarak Linux işletim sistemlerinde yaygın olarak kullanılan Network File System (NFS) sistemi ele alınmıştır.

İkinci olarak farklı işletim sistemleri üzerinde dosya paylaşımına olanak sağlayan Samba ele alınmıştır.

Son olarak incelediğimiz iki paylaşım hizmetinin güvenliği ve performansı ele alınmıştır.

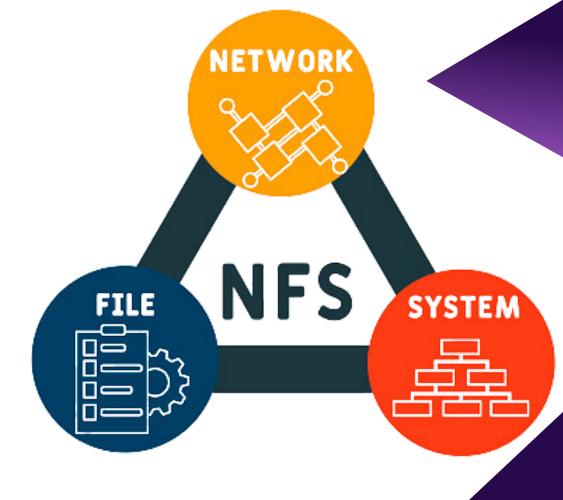

NFS sistemi Linux tabanlı sistemler arasında dosya ve veri paylaşımını gerçekleştiren bir yazılımdır.

NFS sisteminin birden fazla kullanım alanı vardır.

#### NFS Temel İşlevleri:

- Merkezi Depolama
- Erişim Kolaylığı
- Uzaktan Erişim
- Kolay Yönetim ve Yedekleme

NFS Güvenlik Önlemleri

NFS Güvenlik Önlemleri

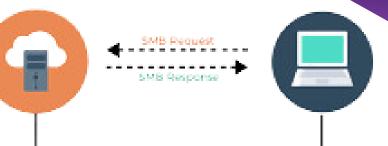

Samba dosya paylaşımı Linux işletim sistemleri üzerinde kaynak ve dosya paylaşımını gerçekleştirebilmek için kullanımda olan açık kaynaklı bir yazılımdır.

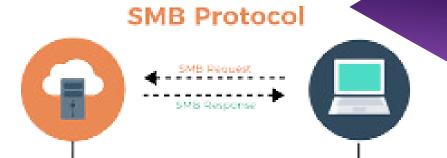

Samba Ne İşe Yarar?

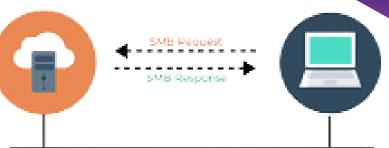

Samba Nasıl Çalışır?

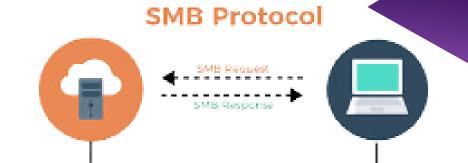

Sambanın İşleyişi

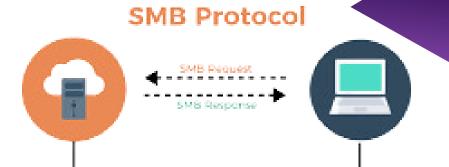

#### **Kullanım Alanları**

Avantajları ve Dezavantajları

#### Güvenlik Önlemleri

#### Performans Ölçütleri:

- Max Boyut
- Log Seviyesi
- Ağ Yapılandırması
- Disk ve Dosya Sistemleri
- Samba Konfigürasyonu

#### NFS VS SAMBA

#### **Farklar:**

- Özgün Tasarım
- Paylaşılan Kaynaklar
- İstemci-İstemci İletişimleri
